Default

Teaser

 **Error message**

There is a security update available for your version of Drupal. To ensure the security of your server, you should update immediately! See the [available updates](#) page for more information and to update your software.

Content items can be displayed using different view modes: Teaser, Full content, Print, RSS, etc. *Teaser* is a short format that is typically used in lists of multiple content items. *Full content* is typically used when the content is displayed on its own page.

Here, you can define which fields are shown and hidden when *Page* content is displayed in each view mode, and define how the fields are displayed in each view mode.

Text Formats

Important Note: Prior to Drupal 10.1 the [Allowed Formats](#) contrib module was used to configure the allowed text formats for text fields. Starting with Drupal 10.1 this feature is in core. In *Chapter 3 - Install the Site -> Install Contrib Modules*, we installed and enabled this module. We can remove the module since it's no longer needed.

- Navigate to `admin/modules/uninstall` and un-install “Allowed Formats”.
- Remove the module files with `composer remove drupal/allowed_formats` and clear caches.

```
~/Projects/drupal-sites/arsha $ ddev composer remove drupal/allowed_formats
```

```
~/Projects/drupal-sites/arsha $ ddev drush cr
```

Note: When using the Drupal core allowed formats feature, the ‘Allowed text formats’ link for text fields still shows. This issue is being addressed in [Add an option to 'hide filter tips' on text fields](#). It appears though this won’t be fixed until Drupal 11.

Next, modify the existing (default) “Basic HTML” text format and create a new “Header HTML” text format as shown in the following screenshots.

Note: Unless otherwise indicated, we’ll use the “Header HTML” text format for all text fields marked as “Header”. All other text fields will use the “Basic HTML” text format.

- **Basic HTML** (`admin/config/content/formats/manage/basic_html?destination=/admin/config/content/formats`) page

- **Header HTML** (`admin/config/content/formats/manage/header_html?destination=/admin/config/content/formats`) page

Header HTML

[Configure](#) [Devel](#)

A text format contains filters that change the display of user input; for example, stripping out malicious HTML or making URLs clickable. Filters are executed from top to bottom and the order is important, since one filter may prevent another filter from doing its job. For example, when URLs are converted into links before disallowed HTML tags are removed, all links may be removed. When this happens, the order of filters may need to be rearranged.

Name*
Header HTML Machine name: header_html

Roles

 Authenticated user
 Content editor
 Administrator

Text editor
CKEditor 5

Toolbar configuration
Move a button into the Active toolbar to enable it, or into the list of Available buttons to disable it. Buttons may be moved with the mouse or keyboard arrow keys.

The toolbar buttons that don't fit the user's browser window width will be grouped in a dropdown. If multiple toolbar rows are preferred, those can be configured by adding an explicit wrapping breakpoint wherever you want to start a new row.

Available buttons

Active toolbar

CKEditor 5 plugin settings

Headings

Source editing

Alignment

Enabled Headings

- Heading 1
- Heading 2
- Heading 3
- Heading 4
- Heading 5
- Heading 6

These are the headings that will appear in the headings dropdown. If a heading is not chosen here, it does not necessarily mean the corresponding tag is disallowed in the text format.

Enabled filters

- Limit allowed HTML tags and correct faulty HTML
- Display any HTML as plain text
- Track images uploaded via a Text Editor
- Align images
- Convert line breaks into HTML (i.e.
 and <p>)
- Caption images
- Convert URLs into links
- Restrict images to this site
- Lazy load images
- Correct faulty and chopped off HTML
- Embed media

Instuct browsers to lazy load images if dimensions are specified. Use in conjunction with and place after the 'Track images uploaded via a Text Editor' filter that adds image dimensions required for lazy loading. Results can be overridden by .

Shows that the latest versions of images uploaded via a Text Editor are displayed, along with their dimensions.

Uses a data-align attribute on tags to align images.

Ensures that the latest versions of images uploaded via a Text Editor are displayed, along with their dimensions.

Uses a data-caption attribute on tags to caption images.

Ensures that the latest versions of images uploaded via a Text Editor are displayed, along with their dimensions.

Allows usage of tag sources that are not hosted on this site by replacing them with a placeholder image.

Instuct browsers to lazy load images if dimensions are specified. Use in conjunction with and place after the 'Track images uploaded via a Text Editor' filter that adds image dimensions required for lazy loading. Results can be overridden by .

Embeds media items using a custom tag, <drupal-media>. If used in conjunction with the 'Align/Caption' filters, make sure this filter is configured to run after them.

Filter processing order

Limit allowed HTML tags and correct faulty HTML Show row weights

Correct faulty and chopped off HTML

Filter settings

Limit allowed HTML tags and correct faulty HTML

Enabled

Allowed HTML tags

```
<br> <p class="text-align-left text-align-center text-align-right text-align-justify"><h1 class="text-align-left text-align-center text-align-right text-align-justify"><h2 class="text-align-left text-align-center text-align-right text-align-justify"><h3 class="text-align-left text-align-center text-align-right text-align-justify"><h4 class="text-align-left text-align-center text-align-right text-align-justify"> <h5 class="text-align-left text-align-center text-align-right text-align-justify"> <strong> <em> <a href=">
```

With CKEditor 5 this is a read-only field. The allowed HTML tags and attributes are determined by the CKEditor 5 configuration. Manually removing tags would break enabled functionality, and any manually added tags would be removed by CKEditor 5 on render.

Display basic HTML help in long filter tips

Image Styles

TIP: Refer to [How To Manage Image Styles for Media in Drupal 8](#) for detailed information on configuring image styles for use with the Media module..

Hero (780x546) Image Style

- **Edit style Hero (780x546)** (`admin/config/media/image-styles/manage/hero_780x546_`) page

The screenshot shows the 'Edit style' interface for 'Hero (780x546)'. It displays two versions of a hot air balloon image: the original (800px wide) and the styled version (780x546). The original image is labeled 'original (view actual size)' and has dimensions 800px wide by 600px high. The styled image is labeled 'Hero (780x546) (view actual size)' and has dimensions 780px wide by 546px high. Below the images is a form field for 'Image style name *' containing 'Hero (780x546)', with a note 'Machine name: hero [Edit]'. A red box highlights this field. Further down, under the 'Effect' tab, there is an operation 'Scale and crop 780x546' with an 'Edit' button.

Add new Media view mode	

Hero (780x546) Media Image display

- **Manage display** (`admin/structure/media/manage/image/display/hero_780x546_`) page

The screenshot shows the 'Manage display' page for a media image style named 'Hero (780x546)'. The page has a navigation bar at the top with links like Back to site, Manage, Shortcuts, admin, Go to, Dev, Content, Structure, Appearance, Extend, Configuration, People, Reports, and Help. Below the navigation is a breadcrumb trail: Home > Administration > Structure > Media types > Edit image > Manage display. The main title is 'Manage display' with a star icon.

The page features a horizontal navigation bar with tabs: Edit, Manage fields, Manage form display, **Manage display** (which is highlighted in blue), Manage permissions, and Devel. Below this is a secondary navigation bar with Default, **Hero (780x546)** (highlighted with a red box), and Media library.

A prominent error message box is displayed, indicating a security update available for Drupal. It says: "There is a security update available for your version of Drupal. To ensure the security of your server, you should update immediately! See the [available updates](#) page for more information and to update your software."

The main content area shows a table for managing fields. The first row, for the 'Image' field, has its 'Format' dropdown set to 'Image' and its 'Image style' dropdown set to 'Hero (780x546)', which is also highlighted with a red box. A note below the dropdown says 'Image loading: lazy'. The 'Label' dropdown is set to '- Visually Hidden -'.

Below this, there are sections for 'Disabled' fields: 'Authored by', 'Name', 'Thumbnail', and 'Authored on', each with their own configuration options.

At the bottom left is a blue 'Save' button.

Webform

Newsletter Form

- Navigate to admin/structure/webform and click **+Add webform**
- Enter “Newsletter” for **Title** and “Newsletter” for **Administrative description**
- Click Save. This will take you the Newsletter Elements page (admin/structure/webform/manage/newsletter)
- Click **+Add element**, then click **Add element** for the Email element.
- Enter “Email” for the **Title** field and click Save.

We won't be dealing with newsletter form submission and processing. Disable form submissions using the "Conditional logic" setting on the **Submit button(s)** element as shown in the below screenshot. (This is only one way to disable submissions). **Note: This step is optional.**

Edit Submit button(s) element

General Conditions Advanced Access Expand all

Conditional logic

State	Element	Trigger/ Value
Disabled	if Any of the following is met:	+ -
	Email [Email]	+ -
	Email [Email]	+ -

The Newsletter Elements page (admin/structure/webform/manage/newsletter) should appear as below. Note the “Disabled” status under the “Conditional” column.

The **Elements** page allows users to add, update, duplicate and delete elements and wizard pages. [▶ Watch video](#)

Save					

- **Manage display** (`admin/structure/types/manage/site_page/display`) page

Content items can be displayed using different view modes: Teaser, Full content, Print, RSS, etc. *Teaser* is a short format that is typically used in lists of multiple content items. *Full content* is typically used when the content is displayed on its own page.

Here, you can define which fields are shown and hidden when *Page* content is displayed in each view mode, and define how the fields are displayed in each view mode.

- Navigate to **Page content settings for Page** (`admin/structure/types/manage/site_page/fields/node.site_page.field_page_content`) page and click “Accordion” checkbox under **Paragraph types**.

Chapter 14

Content Types

Service

Before creating and configuring the Service content type, download and enable the [Weight](#) contrib module.

This module provides a “weight” field that can be added to any entity (block, content type / node, paragraph etc.). The weight value can then be used as a sort criteria in a View or other places where custom sorting is needed.

- Download and enable the Weight module

```
~/Projects/drupal-sites/arsha $ ddev composer require 'drupal/weight:^3.4'
```

```
~/Projects/drupal-sites/arsha $ ddev drush en -y weight
```

Next, refer to screenshots below to create and configure the Service content type.

- **Edit Service content type** (`admin/structure/types/manage/service`) page

Name *

Machine name: service

The human-readable name of this content type. This text will be displayed as part of the list on the *Add content* page. This name must be unique.

Description

Company Services

This text will be displayed on the *Add new content* page.

Note: We've scaled and cropped the image to 1024x630 ("Scale and crop 1024x630") instead of the expected 1024x768 so as not to distort the original skills.png image given to us in the Arsha template. Change the scaling to 1024x768 if a new "Skills" image is used. Use an image bigger than 1024x768. A good rule of thumb is uploaded images should be at least 1920x1080. The image style applied to the image will scale it to the proper size.

- Navigate to **Page content settings for Page** (admin/structure/types/manage/site_page/fields/node.site_page.field_page_content) page and click “Progress bar and media” checkbox under **Paragraph types**.

Services

The Services view will be one of the Services paragraph type fields. Out of the box, the Drupal core Field module doesn't support a "View" field type. For this, we need to use the [Views Reference Field](#) contrib module. This module provides the ability to add a view as a reference field to any entity (block, paragraph, content type / node etc.).

- Download and enable the module.

```
~/Projects/drupal-sites/arsha $ ddev composer require 'drupal/viewsreference:^2.0@beta'
```

```
~/Projects/drupal-sites/arsha $ ddev drush en -y viewsreference
```

Next, refer to the screenshots below for field, form display and display configuration.

Note: At the time of this writing the latest version of the Views Reference Field module is 8.x-2.0-beta7. That version has a bug where none of the “Enable extra settings” config settings including the “Include View Title” setting are being saved - noted in the above screenshot. Patch <https://www.drupal.org/files/issues/2023-11-17/configuration-schema-for-views-reference-field-settings-3402036-4.patch> fixes this issue.

See [How to apply a patch in Drupal](#) for information on applying patches. Use the following command to download the cweagans/composer-patches package.

```
~/Projects/drupal-sites/arsha $ ddev composer require cweagans/composer-patches:~1.0
```

- **Manage form display** (`admin/structure/paragraphs_type/services/form-display`) page

The screenshot shows the 'Manage form display' configuration page for a Paragraphs type. It lists fields and their corresponding widgets. The 'Field' column contains 'Header', 'Text', and 'Content'. The 'Widget' column contains 'Text area (multiple rows)', 'Text area (multiple rows)', and 'Views reference select list'. There are also dropdown menus for 'Number of rows: 1' and 'Views reference select list'. A 'Disabled' section is shown below, containing 'Published' (with 'Single on/off checkbox' widget) and 'Authored on' (with 'Datetime Timestamp' widget). A blue 'Save' button is at the bottom left.

There is a security update available for your version of Drupal. To ensure the security of your server, you should update immediately! See the [available updates](#) page for more information and to update your software.

There are security updates available for one or more of your modules or themes. To ensure the security of your server, you should update immediately! See the [available updates](#) page for more information and to update your software.

Content items can be displayed using different view modes: Teaser, Full content, Print, RSS, etc. Teaser is a short format that is typically used in lists of multiple content items. *Full content* is typically used when the content is displayed on its own page.

Here, you can define which fields are shown and hidden when *Project* content is displayed in each view mode, and define how the fields are displayed in each view mode.

Field	Label	Format
Project images	- Hidden -	<p>Format settings: Rendered entity</p> <p>View mode*</p> <p>Project (full size)</p> <p>Fences</p> <p>Field Tag</p> <p>None (No wrapping HTML)</p> <p>Field Items Wrapper Tag</p> <p>None (No wrapping HTML)</p> <p>Field Item Tag</p> <p>None (No wrapping HTML)</p> <p>Label Tag</p> <p>None (No wrapping HTML)</p>

Note: The Fences settings for the Content and Project category fields is shown above. Note that we've removed **all** the wrapping HTML for the two fields. The Fences setting for the Header and Text fields can remain at their defaults.

Note: After configuring the Portfolio paragraph type perform the following steps:

- Navigate to **Permissions** (admin/people/permissions) page to add Portfolio paragraph type permissions. Follow the previous paragraph types permissions examples.
- Navigate to **Page content settings for Page** (admin/structure/types/manage/site_page/fields/node.site_page.field_page_content) page and check the “Portfolio” checkbox under **Paragraph types**.

Pathauto

Project

- **Patterns** (admin/config/search/path/patterns) page

This page provides a list of all patterns on the site and allows you to edit and reorder them.

The screenshot shows the 'Patterns' configuration page. At the top, there's a blue button labeled '+ Add Pathauto pattern'. Below it is a table with columns: Label, Pattern, Pattern type, Conditions, and Operations. There are two rows in the table. The first row has a red border and contains: 'Project' in the Label column, '[node:content-type]/[node:title]' in the Pattern column, 'Content' in the Pattern type column, '• Content type is project' in the Conditions column, and a 'Duplicate' button with a dropdown arrow in the Operations column. The second row contains: 'Service' in the Label column, '[node:content-type]/[node:title]' in the Pattern column, 'Content' in the Pattern type column, '• Content type is service' in the Conditions column, and a 'Duplicate' button with a dropdown arrow in the Operations column. A 'Save' button is located at the bottom left of the table area.

Patterns				
Label	Pattern	Pattern type	Conditions	Operations
⊕ Project	[node:content-type]/[node:title]	Content	• Content type is project	Duplicate ▾
⊕ Service	[node:content-type]/[node:title]	Content	• Content type is service	Duplicate ▾

Taxonomy

Project

- Taxonomy (admin/structure/taxonomy) page

Taxonomy is for categorizing content. Terms are grouped into vocabularies. For example, a vocabulary called "Fruit" would contain the terms "Apple" and "Banana".

Chapter 16

Blocks

Company Contact Block

Before creating and configuring the Company Contact block, download and enable the [Simple Google Maps](#) contrib module.

This module provides a field formatter to display an address as a Google map. In the **Manage display** section below, we use the “Google Map from one-line address” Format for the Company location field.

- Download and enable the Simple Google Maps module

```
~/Projects/drupal-sites/arsha (main) $ ddev composer require 'drupal/simple_gmap:^3.1'
```

```
~/Projects/drupal-sites/arsha (main) $ ddev drush en simple_gmap -y
```

- **Manage fields** (admin/structure/types/manage/team/fields) page

The screenshot shows a table with columns for Label, Machine name, Field type, and Operations. The 'Operations' column includes an 'Edit' button and a dropdown menu.

Label	Machine name	Field type	Operations
Job description	field_text	Text (formatted, long)	<button>Edit</button> ▼
Job title	field_plain_text	Text (plain)	<button>Edit</button> ▼
Photo	field_media_image	Entity reference Reference type: Media Media type: Image	<button>Edit</button> ▼
Social media links	field_social_media_links	Link	<button>Edit</button> ▼
Weight	field_weight	Weight	<button>Edit</button> ▼

Note: field_text, field_plain_text, field_media_image and field_weight are re-used fields.

Note: For the field_social_media_links field, ideally we'd use the field provided by the [Social Media Links Block and Field](#) (or the [Social Link Field](#)) contrib module. However as of this writing both of these modules have a bug where the field doesn't render properly in a view. For the Social Media Links Block and Field contrib module see '['null' values in array using views](#)'.

Instead of using the field provided by above mentioned modules we just use the core Link field. As we'll see in *Chapter 16 - Front Page Theming (Part 4) -> Add Team Page Content*, we'll use the link portion of the field for the URL and the link text portion of the field for the social media icon.

Below is a screenshot of the field_social_media_links field settings. Note that we only allow External links and link text is required. In **Field settings**, we limit the number of values to 4.

- **Social media links settings for Team** (`admin/structure/types/manage/team/fields/node.team.field_social_media_links`) page

Company Contact Info

Before creating and configuring the Company Contact block, download and enable the [Block field](#) contrib module.

This module enables a block (custom, core, views) to be added as a field to any content entity (content type, paragraph etc). In the **Manage fields** section below we use the “Block (plugin)” **Field type** (provided by the Block field module) for the Company contact field. This field is the Company contact custom block we created in *Blocks -> Company Contact Block*

- Download and enable the Block field module

```
~/Projects/drupal-sites/arsha (main) $ ddev composer require 'drupal/block_field:^1.0@RC'
```

```
~/Projects/drupal-sites/arsha (main) $ ddev drush en block_field -y
```

- **Manage fields** (admin/structure/paragraphs_type/company_contact_info/fields) page

+ Create a new field	+ Re-use an existing field

Displays

The screenshot shows the 'Displays' configuration interface for a 'Block' view. The top navigation bar includes 'Block' and '+ Add' buttons, and a 'Edit view name/description' dropdown. A 'Duplicate Block' button is located in the top right corner.

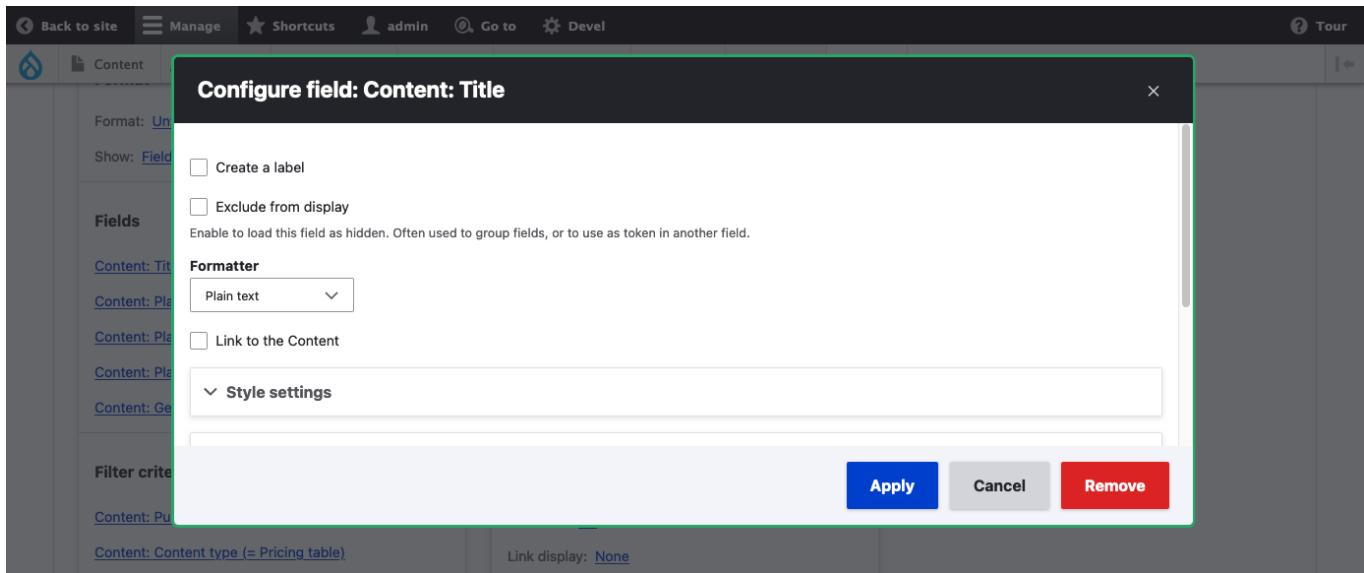

The main configuration area is divided into several sections:

- Title:** Title: [Pricing table](#)
- Format:** Format: [Unformatted list](#) | [Settings](#). Show: [Fields](#) | [Settings](#).
- Fields:** Content: Title, Content: Plan price, Content: Plan frequency, Content: Plan features, Content: Get started link.
- Filter criteria:** Content: Published (= Yes), Content: Content type (= Pricing table).
- Sort criteria:** Content: Weight (asc).
- Block settings:** Block name: [Pricing table](#), Block category: [Lists \(Views\)](#), Allow settings: [Items per page](#).
- Access:** Permission | View published content.
- Header:** Add button.
- Footer:** Add button.
- No results behavior:** Add button.
- Pager:** Use pager: [Display a specified number of items](#) | [3 items](#). More link: [No](#). Link display: [None](#).
- Advanced:** A collapsed section indicated by a downward arrow.

At the bottom left are 'Save' and 'Cancel' buttons.

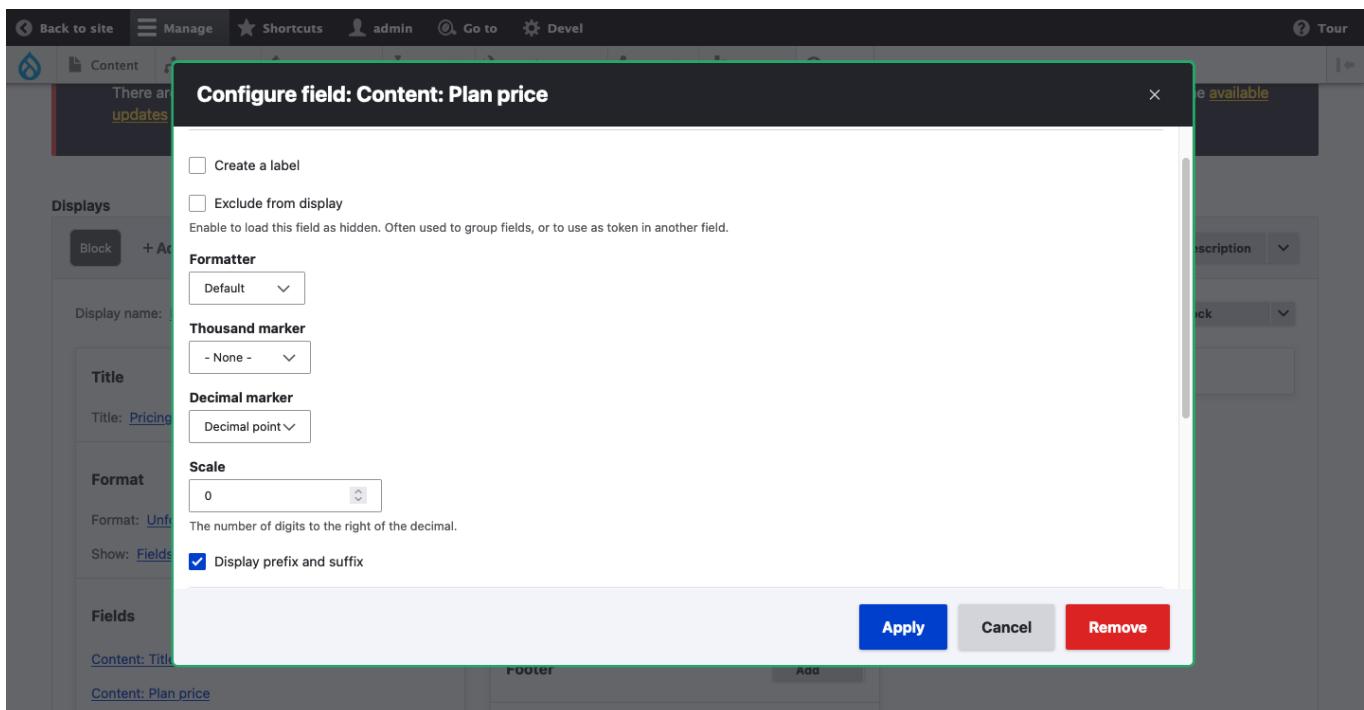

Note: “Format: Unformatted list | Settings are at their default settings” and “Show: Fields | Settings are at their default settings”

- **Configure field: Content: Title settings modal**

Note: Styles settings, Rewrite results, No results behavior, Administrative title are at their default settings.

- Configure field: Content: Plan price modal

Note: Styles settings, Rewrite results, No results behavior, Administrative title are at their default settings.

- **Configure field: Content: Plan frequency**

The screenshot shows the 'Configure field: Content: Plan frequency' dialog box. At the top, it says 'Appears in: project, team, pricing_table. Also known as: Content: Plan frequency, Content: Project client'. Below this are several configuration sections:

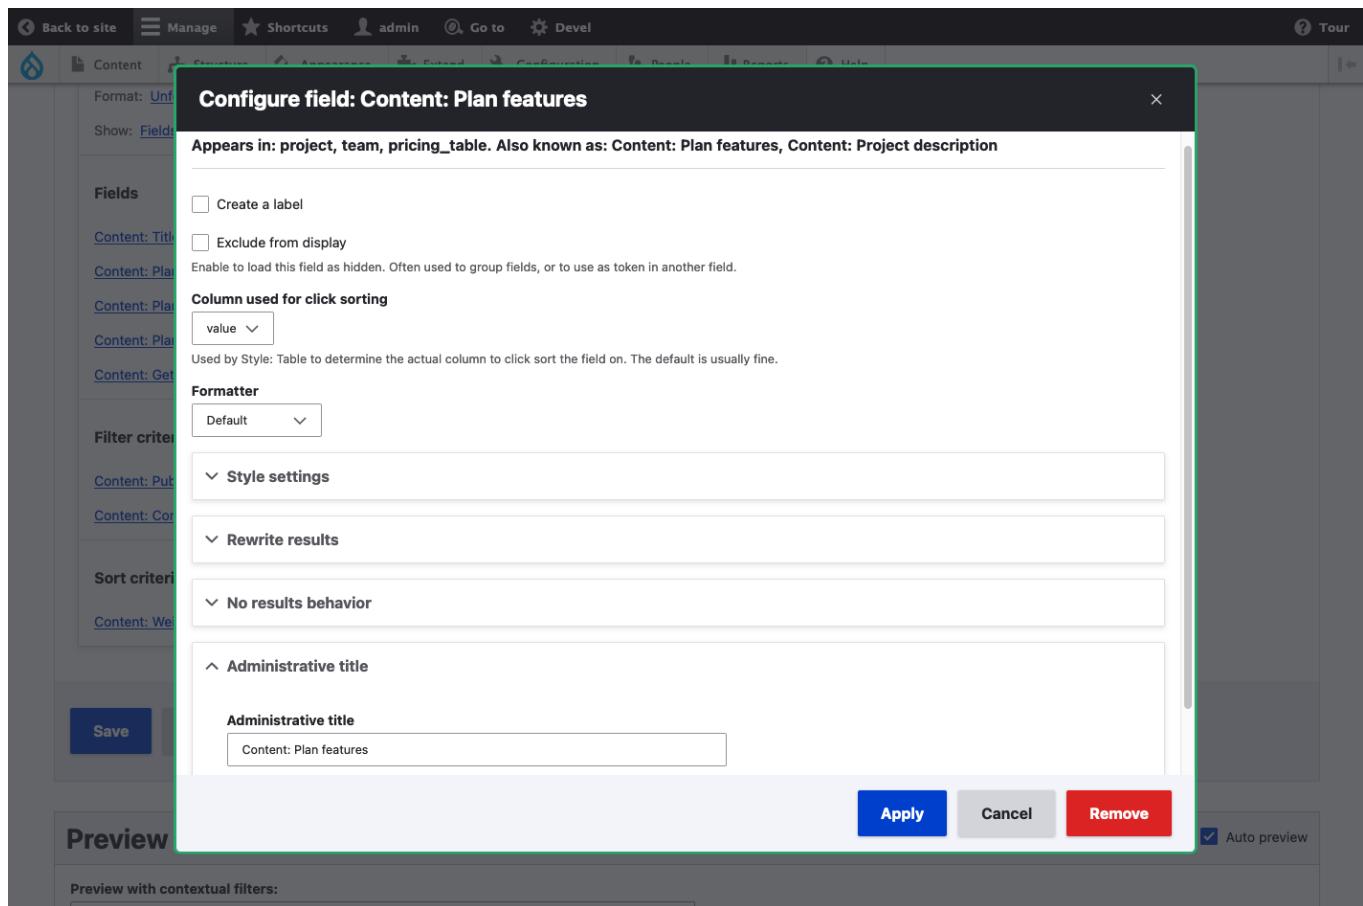

- Create a label
- Exclude from display
- Formatter**: Plain text
- Link to the Content
- Style settings**
- Rewrite results**
- No results behavior**
- Administrative title**: Content: Plan frequency

A note below the administrative title says: "This title will be displayed on the views edit page instead of the default one. This might be useful if you have the same item twice."

At the bottom right are three buttons: 'Apply' (blue), 'Cancel' (grey), and 'Remove' (red). A checked checkbox for 'Auto preview' is visible on the right side of the dialog.

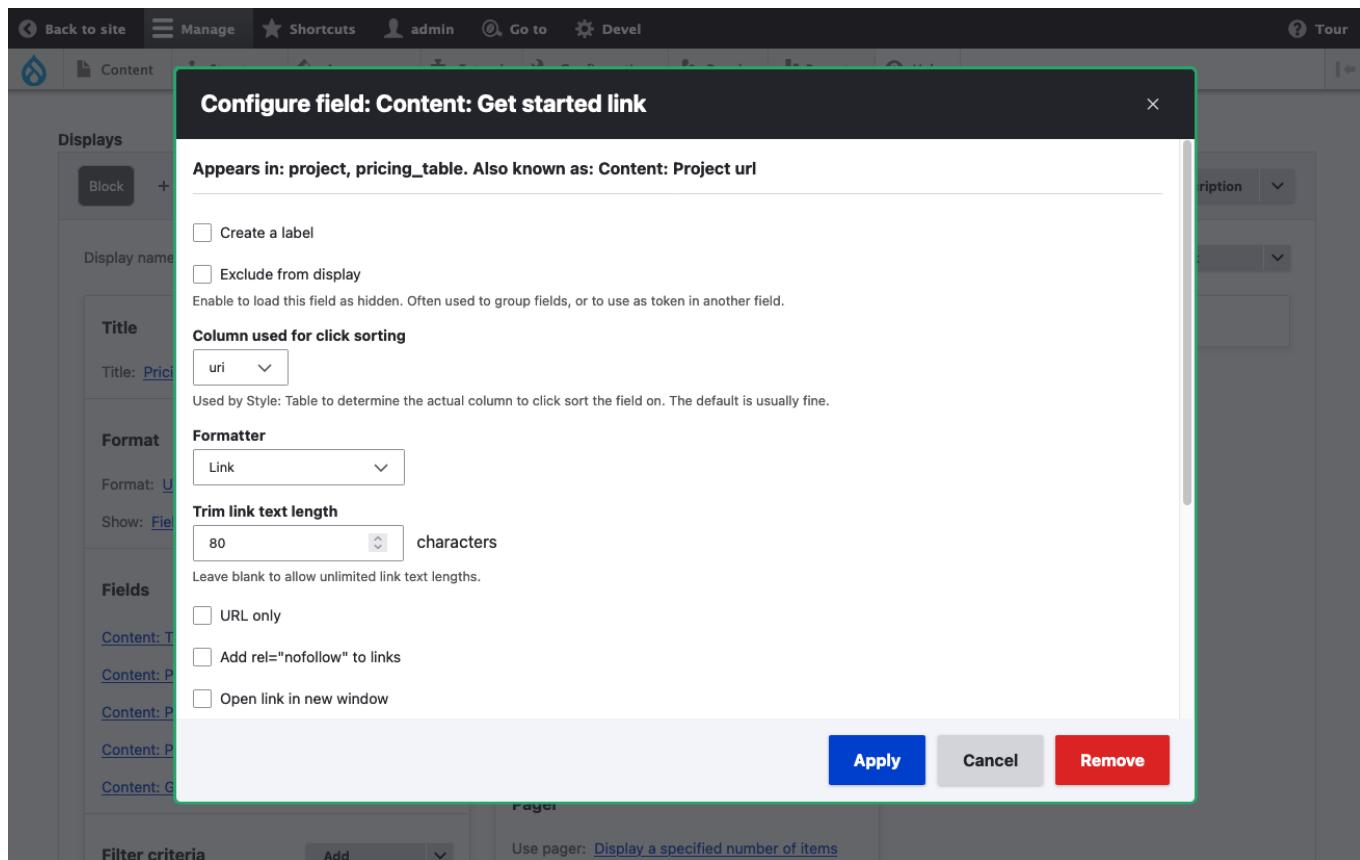

Note: Styles settings, Rewrite results, No results behavior are at their default settings. Set **Administrative title** to “Content: Plan frequency”

- **Configure field: Content: Plan features**

Note: Styles settings, Rewrite results, No results behavior are at their default settings. Set Administrative title to “Content: Plan features”

- Configure field: Content: Get started link

Note: Styles settings, Rewrite results, No results behavior, Administrative title are at their default settings.

Webform

Contact Form

For the Company contact info paragraph Contact form, we'll use the built-in Contact form provided by the Webform contrib module as-is with no changes. The Contact form Elements page (admin/structure/webform/manage/contact) should appear as shown below.

The **Elements** page allows users to add, update, duplicate and delete elements and wizard pages. [▶ Watch video](#)
